# **Crest, Dehesa, Granite Hills, Harbison Canyon Community Trails and Pathways Plan**

Trails: The Community Connection

he Community Trails Master Plan will be utilized to develop a system of interconnected regional and community trails and pathways. These trails and pathways are intended to address an established public need for recreation and transportation, but will also provide health and quality of life benefits associated with hiking, biking, and horseback riding throughout the County's biologically diverse environments.

Community trails serve a different function than regional trails, which are focused on the provision of long linear distances. Instead, community trails are "local public facilities" in close proximity to residents that provide transportation, recreation, access, infrastructure, linkages and safe routes throughout a community.

The Community Trails Master Plan (CTMP) involves both trail development and management on public, semi-public and private lands. The CTMP has established two forms of non-motorized facilities called "Trails" and "Pathways" that provide passive recreational, and alternative modes of transportation.

Crestridge Ecological Reserve Rios Canyon Road, Crest

*Trails* are typically away from vehicular roads that are primarily recreational in nature but can also serve as an alternative mode of transportation. They are softsurface facilities for single or multiple uses by pedestrians, equestrians, and mountain bicyclists.

Pathways are a non-motorized transportation facility located within a parkway or road right of way. A riding and hiking trail located in the road right of way is considered a pathway. They are soft-surfaced facilities intended to serve both circulation and recreation purposes. Pathways help make critical connections and are an integral part of a functional trail system.

#### **COMMUNITY TRAIL STATEMENT**

#### History of Trails, and Trail Usage

The Crest, Dehesa, Granite Hills, Harbison Canyon Planning Area is a very active, rural, outdoors-oriented area consisting of four distinct and very different communities. There is little new development, so quite a lot of the residents are "old timers" who have been walking, hiking, and riding the trails throughout the nearby hills for generations. The community is fortunate to have some large tracts of dedicated open space, at Crestridge Ecological Preserve, and at McGinty Mountain.

The trails in the Crest, Dehesa, Granite Hills, Harbison Canyon Planning Area serve a much larger population than just our local residents. In addition to serving the four within the communities area—Crest. Dehesa. Granite Hills. and Harbison Canyon, our Planning Area is a "hub", connecting the neighboring communities of El Cajon, Lakeside, Willow Glen/Singing Hills, Valle de Oro, and Crest-Dehesa, Dulzura, and Jamul to whole networks of trails they could not otherwise reach. These trails also have the potential to connect with trail on the Sycuan reservation, and in the Cleveland National Forest. To our west lies the densely populated and underserved City of El Cajon (pop. 94,900 in 2000), which has no open space or trails of its own.

Crest has a County Park with a community-built-and-maintained riding arena and facilities. Several events are held each year at South Lane Park, including riding clinics; trail trials, and other events. Equestrians can trailer to this park and, ride on the trails originating at the park. The trails throughout and around the community are very popular with walkers and with children on bikes.

Harbison Canyon has several routes popular with walkers and many trails that are used regularly by equestrians nearby. Because the steepness of the terrain in Harbison Canyon limits opportunities for walking and riding here, connections to trails in surrounding areas are especially important to these residents.

Dehesa is another strongly equestrian community with a broad trail user community. Trails run throughout the area including many unpaved roads. The Sloane Canyon area is popular and has hosted many large events, including endurance rides and competitive trail rides.

Granite Hills, until recently, had a community riding arena and neighborhood pathway system and is still very much an equestrian community with many horses, mules, and donkeys kept on individual properties. In addition, new people are continually moving to the area for the purpose of keeping animals. Historically, riders would leave from the arena on

Greenfield Avenue and ride up a trail (near/along Suncrest Truck Trail) to Crest. Crest residents would ride down the trail to shows in Granite Hills or to meet and ride with friends.

Part of the City of El Cajon extends like "a finger" through Granite Hills. This area includes a college, two high schools, a middle school, and an elementary school. These students would use the proposed roadside pathways for safe passage to school and represent a large existing user group. Within the Crest, Dehesa, Granite Hills, Harbison Canyon-Granite Hills-Harbison Canyon Planning Area, adjacent to Crest, is the Crestridge Ecological Reserve, a 2,600acre open space preserve that provides an opportunity for students from schools throughout the surrounding cities to attend nature and ecology classes. This preserve, and the people it attracts, will increase our need for trails. Communities in the southern part of the Lakeside Planning Area, south of Interstate 8, will gravitate toward the trails in the area, especially those above the proposed Rios Canyon area development.

Trail users also access our trails via the major trail originating at the East County Square shopping center equestrian staging area. This staging area not only serves the local communities, but provides an opportunity for trail users outside of the area to experience the community trails Crest, Dehesa, Granite Hills, Harbison Canyon welcomes these trail users and is proud to

have the unique and attractive open spaces that bring them here.

There is an amazing collection untouched, varied habitats, migratory bird flyways, creeks and rivers, rock formations, cliff faces, mountains, and valleys. Planning area encourages pathways and trails in and between the communities, and trails that connect to trails in open space. The vast majority of recreational trail and pathway use among our residents will be regular, even daily, walking and riding from home. Being able to reach safe, offpavement pathways or trails within walking distance from home, and to access, via trails, the trails in and around nearby communities is very important to a successful trail system.

#### THE NEED FOR TRAILS

The community trail needs are based on an equation established by the Trails System Assessment (TSA) in 2001, which identified a minimum baseline level of service for each community by population. The Baseline Level of Service or Trail Need is 0.8 miles of trail per 1,000 people.

The "Trail Need" is the minimum length of trail miles (baseline level of service) for each Community and Subregional Plan Area. The TSA calculations for community trail needs are as follows:

■ **Trail Need** = (Community Population /1,000 residents x 0.8 miles of trails)

- **2000 Trail Need** = (**2000** population /1,000 residents x 0.8 miles of trails)
- **2020 Trail Need** = (**2020** population /1,000 residents x 0.8 miles of trails)

Population statistics from the 2000 U.S. Census were used to determine the current trail needs in Crest, Dehesa, Granite Hills, Harbison Canyon. Based on the census, the population of the Community Plan Area is 9,440 and there is a current need for 8 miles of community trails. In the year 2020, the population is projected to increase to 11,110 and there would be a future need for 9 miles of community trails.

For additional information about the baseline level of service and trail needs, please refer to the discussion under "The Need for Trails" and Tables NT-1 and NT-2 in the CTMP.

# COUNTYWIDE TRAIL GOALS AND POLICIES

The "Countywide Goals and Policies" contained in the CTMP apply to all community and sub-regional plan areas. Community-specific goals and policies are intended to accommodate specific needs and they will be implemented when feasible. The Crest, Dehesa, Granite Hills, Harbison Canyon Community Planning Group developed Community Specific Goals and Policies for their community trails plan. The abbreviations are as follows:

**SG** = Community Specific Goal **SP** = Community Specific Policy

#### Goal: SG 1

Provide trail access to the California Riding and Hiking Trail from communities within this plan area.

#### Goal: SG 2

Provide trail linkages between communities throughout this plan area.

### Policy: SP 1

New pathways are to have fencing or barriers between the traveled portion of the road and the pathway in cases where parkway widths are 15 feet or greater.

Where Community-specific goals and policies are not addressed, the "Countywide Goals and Policies" contained in CTMP shall apply.

# DESIGN AND CONSTRUCTION GUIDELINES

Countywide trail guidelines in the Community Trails Master Plan apply to all community and sub-regional plan areas. Community-specific guidelines are intended to accommodate specific community needs and they will be implemented when feasible. Where Community specific guidelines are not addressed, the Countywide "Design and Construction Guidelines" contained in the CTMP shall apply.

# CREST, DEHESA, GRANITE HILLS, HARBISON CANYON COMMUNITY TRAIL IMPLEMENTATION INFORMATION

The Crest, Dehesa, Granite Hills, Harbison Canyon Community Planning Group developed implementation strategies for their community trails plan. The abbreviation is as follows:

# SIS = Community Specific Implementation Strategies

#### **Implementation Strategy: SIS 1**

#### **Acquiring Trails**

- Take advantage of the CalTrans "Safe Routes to School" program (\$20 million dollars per year). Pursue Transportation Enhancement (TEA) grants, from CalTrans.
- Pursue grants from other sources organizations working for wildlife, open space, public health, walkable communities, reduced vehicle use, etc.
- Educate private property owners about the benefits of indemnification through dedication of easements, and solicit their participation.
- Since a wider community uses trails in our area, investigate the possibility of surrounding communities contributing funds for the acquisition of trails.

Most pathways are already within the County rights-of-way, but many residents do not understand, and block passage with plantings, walls, pavement, rocks, etc. An effort at educating residents (via press coverage, Jacob's Journal, etc.) could go a long way toward keeping the problem from spreading further.

#### **Implementation Strategy: SIS 2**

#### **Developing, Operating, and Maintaining Trails**

- Work with existing trails groups (BCHC), riding clubs (NATRC), mountain biking clubs (SDMBA), hiking, walking, and fitness clubs, bird watching clubs, cross-country teams and clubs, neighborhood associations (e-Crest-rians), school clubs, service organizations, and 4H and FFA groups.
- Encourage and support the formation of new groups for this purpose. Something like a "franchise", where the structure and some support from the County is available to get interested people started, rather than each community struggling with a different approach, and no support from the County.
- Consider using people sentenced to "community service" (although this could lend a stigma to others doing trails work, and might be counterproductive).

- For pathways, provide maintenance with the same funding and crews as for the paved part of the right-of-way.
- Consider, for pathways, neighborhood work-party days, sponsored in some way by the County - with County technical support, and perhaps some heavy equipment and materials - so that neighborhoods can reclaim their road shoulders with "official" endorsement, reduced confrontations, and good chances for success.

#### **Implementation Strategy: SIS 3**

#### **Managing Trails**

- Provide a County maintained structure, possibly enhanced by volunteer support, to record and publicize the existence of trails, area-by-area.
- Provide web space, where people looking for trail opportunities can find them, including parking, staging areas, and parks. Give the Planning Groups and/or trails subcommittees access to maintain and comment on their trails.
- The trails and pathways will need markers. These would guide trail users, and would be a visible reminder of their right to use the trails and pathways.
- Well-used trails are mostly selfmaintaining. Any effort at enabling and

encouraging people to use the trails and pathways would be money well-spent, since it would ultimately reduce the required maintenance, and would help educate trail users about the need for their participation in the building and maintenance of more trails.

# CREST DEHESACOMMUNITY TRAILS MAP SUMMARY

As a result of the community trails outreach process for development of the CTMP, the Crest, Dehesa, Granite Hills, Harbison Canyon Community Planning Group completed several tasks, and prioritized community trails and pathways as well as their special features. Each trail and pathway was labeled and recorded producing a community trails map and index.

Proposed trails shown on trails maps contained in the Community Trail Master Plan depict corridors of general alignments. The term "general alignment" is used to describe the general location of a future trail within a designated corridor so that the specific alignment can be determined during the review and approval process when a discretionary application is submitted for a development permit for land that includes a trail corridor. The designated corridor is approximately one-quarter mile wide. A general alignment is useful because it allows the trail to be located to avoid extreme topographical conditions, sensitive habit or other site-specific constraints.

# CREST, DEHESA, GRANITE HILLS, HARBISON CANYON COMMUNITY TRAILS MAP INDEX

The following community trails map index was completed by the Crest, Dehesa, Granite

Hills, Harbison Canyon Community Planning Group and will be used as a reference tool.

		· ·	NITE HILLS, HARBISON		3 INDEX
Trail #:	USGS Quad(s):	Name:	Trail Status: ( ) Existing (x) Proposed	Trail Priority Criteria: - The north-most 1/3	Special Features: - The southern 1/3 is
1	3	Dehesa-Harbison-Alpine Connector Connections:  Trails #2, 5, 8, 13, 14, 15, 16 Terminates on the south end at proposed staging area at Sloane Cyn Rd. Connects with Alpine Planning Area at north end.	Trail Type: (x) Trail (x) Pathway  Trail Priority: (x) 1 () 2 () 3  Estimated Trail Length in Miles: 3.8	makes a link possible for Alpine residents to reach the CR&HT(via Trail #8).  - This is Harbison Cyn's link to the CR&HT. Dehesa, and all points south and east.  - The pathway segment along Dehesa Rd, is precarious connection that must be preserved and made safer with a set-back pathway. Some sections have already been "improved" by paving the road shoulders, which is counterproductive, and should stopped / reserved.	pathway, along Dehesa Rd. A pathway here, preferably set back a little from the fast, busy road, would provide children with a safer way to school, and would allow walkers and equestrians a safer and more pleasant route than the current road shoulders The northern 2/3 is a very nice trail - mostly wide, graded fire road, along ridgelines, and with expansive views.
Trail #:	USGS Quad(s):	Name:	Trail Status: ( ) Existing (x) Proposed	Trail Priority Criteria: - The Suncrest Trail is the	<u>Special Features:</u> - This trail provides an
